

CASE STUDY

Client: JCC Building Services
End User: University Hospital of Wales, Cardiff
Project: New AHU System
Products: HevaSteam Steam/LTHW Packaged Heat Exchanger
Date: August 2018

Project Description

Arbe were approached to design a steam/water heat exchanger to provide heating water for a new air handling unit being installed in a refurbished building.

The package was installed with a system circulating pump, variable speed, to deliver water to the air handling unit and was also installed with one of our pressurisation units. The unit was also supplied complete with all necessary controls and equipment required.

The HevaSteam package was installed by our client ready for connection to the system, and Arbe completed final commissioning, completing another project designed and completed by Arbe Integrated Engineering.
