

# CASE STUDY

Client: Fosters Bakery  
End User: Self  
Project: Potable Hot Water System  
Products: HevaSteam Steam/DHW Packaged Heat Exchanger  
Date: May 2017

## Project Description

Arbe were approached to size and design a steam/water heat exchanger to provide hot water for a bakery. The unit needed to be sized to suit a number of outlets, in a process where hot water was not previously constantly readily available.

Our unit consisted of an APK plate heat exchanger, an ADXL stainless steel buffer vessel and was supplied complete with pumps, control and all interconnecting pipework. The unit will also provide hot water for future expansion of the system.

The HevaSteam package was installed by the bakery's engineers ready for connection to the system, and Arbe completed final commissioning, completing another project designed and completed by Arbe Integrated Engineering.
