

CASE STUDY

Client: Arthur McKay
End User: HBOS
Project: Trinity Road Collinson & Computer Buildings
Products: HevaCal AL-SEC Sectional Storage Calorifiers
Date: July 2018

Project Description

Arbe followed up on an enquiry to supply 2 off new storage calorifiers for a bank's head office. The new calorifiers were to replace existing storage calorifiers and part of the issue with the replacement was access to the plantrooms, located on the upper floors of the buildings. Arbe designed and supplied sectional storage calorifiers to overcome this issue.

We also oversaw the removal of the existing copper calorifiers which were removed by hand on a Saturday morning and the new calorifiers immediately assembled in situ and hydraulically tested. The units were then piped up back to the system and commissioned, all within 8 hours of the draining of the old calorifiers, over 2 consecutive weekends.

The units were fitted with immersion heaters and de-stratification pumpsets as part of our supply and were wired by the client.
